(57) Abstract :  
 Impact of COVID-19 pandemic on sustainability of Supply chain in India Abstract Despite the remarkable efforts of scientists around the world, we still have a lot to understand. We are in the process of trying to find answers to many questions about the Corona virus. It has been confirmed that millions of people worldwide are affected. However, this will be a small number of victims. This number can be confusing considering the number of people who do not show symptoms such as being physically weak despite being infected with the virus. An experimental method of developing immunity can help researchers diagnose whether a person has the disease. Until we know how many people have died, it is impossible to say for sure about the death rate. It is currently estimated that 1 percent of those infected with the virus die. But the higher the number of asymptomatic people, the lower the mortality rate. India was also severely affected by the disease. It can be said that the lifestyle of the people and the economy of the country have collapsed drastically due to the corona curfew. The impact of corona disease on the lifestyle of the people and the problems caused by the economic downturn in India can be seen in detail. Some plans are proposed for the progress of the plans and measures taken to overcome it and for the changes in the level of economic growth in its implications.
